

APEX TRAIL POWER BI PROJECT

Project Overview:

Apex Trail is a conceptual enterprise used as the foundation for this end-to-end business intelligence project. This document showcases screen shots of a multi-dimensional dashboard designed to transform fragmented raw data into a centralized, high-impact reporting system.

Core Analysis Modules

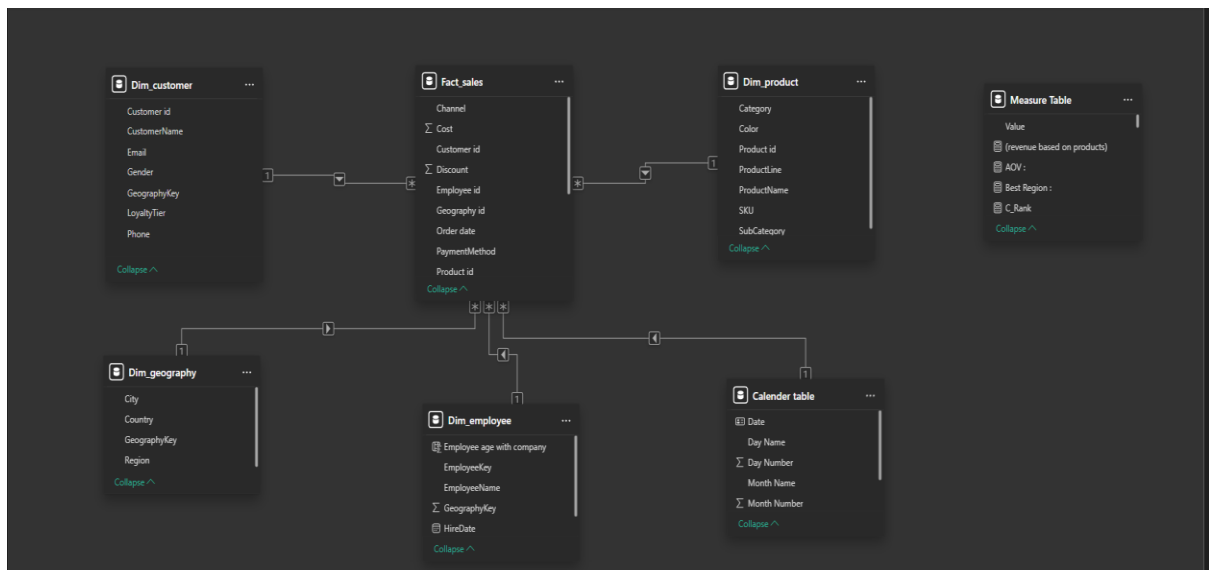

The following screenshots demonstrate a deep dive into four critical business domains:

- **Sales Analysis:** Advanced DAX measures used to track revenue growth and year-over-year performance.
- **Product Performance:** Evaluation of product categories and inventory movement to identify key profit drivers.
- **Employee Productivity:** Analysis of staff-related KPIs and operational efficiency metrics.
- **Geographic Analysis:** Interactive map-based visuals detailing regional market penetration and performance distribution.

Technical Workflow Highlights

- **Data Integration:** Established robust relationships between five distinct tables to create a functional Star Schema.
- **ETL Excellence:** Utilized Power Query for extensive data cleaning and transformation of raw datasets.
- **Visual Strategy:** Designed with a professional, suave aesthetic to ensure data remains scannable and executive-ready.

APEX TRAIL

Driving Performance Through Innovation.

About :

Apex Trail is an imaginative global company created for the purpose of this project to showcase data analysis and dashboard development skills.

The company operates across multiple countries and offers a diverse portfolio of high-quality products across different categories.

Apex Trail specializes in delivering innovative and reliable products such as cameras, laptops, utensils, shorts, jackets, and other consumer goods to customers around the world.

With a strong focus on quality, performance, and customer satisfaction, the company continues to expand its presence in international markets.

Sales performance

Product Analysis

Employee & Geo Insights

Purpose :

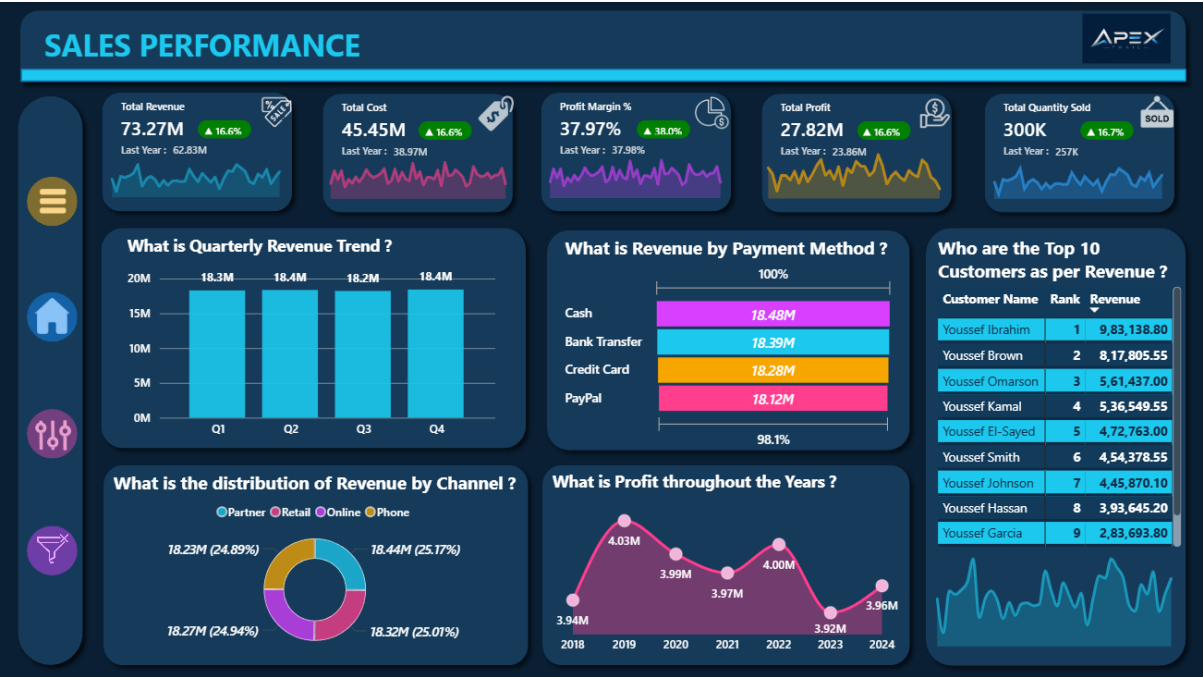

This project is developed to showcase Power BI skills through an interactive business intelligence dashboard.

It analyzes sales performance, product-level insights and employee and geography analysis to demonstrate data modeling, visualization, and analytical capabilities.

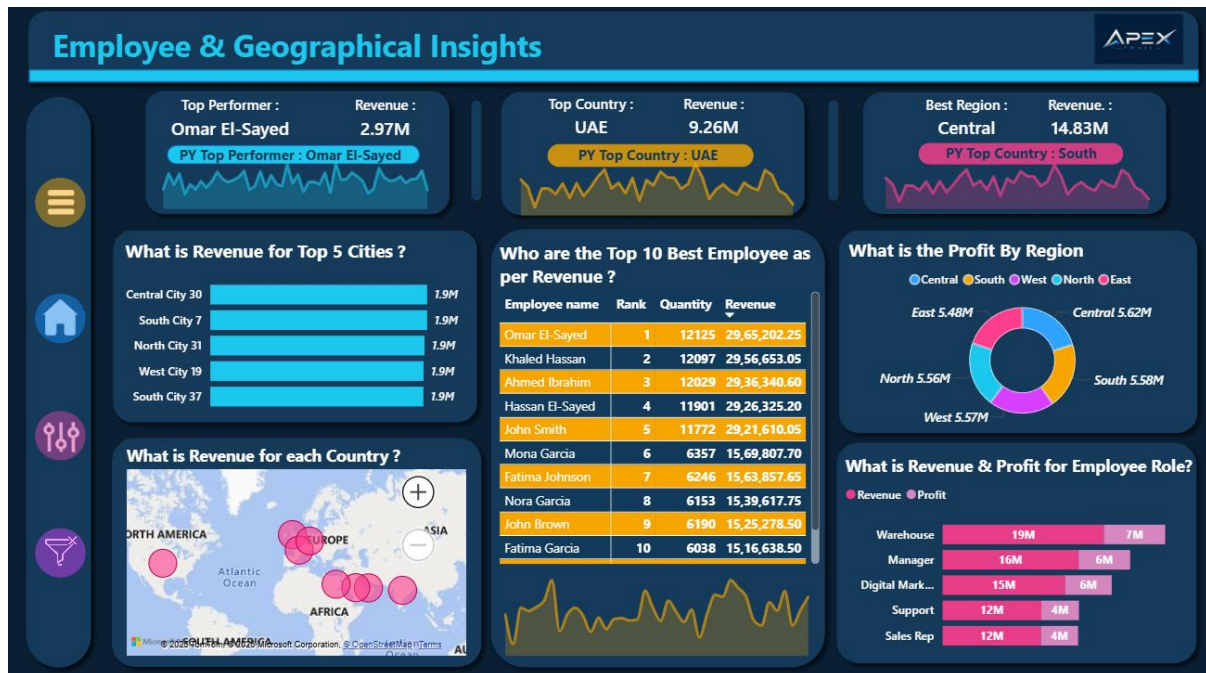

The report integrates multiple datasets and presents key business metrics through dynamic visuals and interactive filters. It is designed to help users explore trends, identify high-performing products and regions, and gain actionable insights.

The project also highlights the use of effective dashboard design to support data-driven decision-making.
